

PETERSON TRACTOR DELIVERS EMISSIONS SOLUTIONS

Throughout the country and within our local and state governments, emission requirements are rapidly changing. Compliance with emissions regulations is not a choice. In fact, it is mandatory. Noncompliance penalties can include:

- Hefty fines
- Stepped-up enforcement by local and state agencies
- Bid specifications and site permits that require diesel emissions reductions
- Decreased profit margins and potential job loss
- Legal actions, litigation costs and lost time.

The good news is Peterson Tractor can help you find the right solution. Our knowledgeable team will provide you with the information, products and services needed to fully comply. From analyzing your fleet to used equipment disposal and DPF cleaning, we offer the total package. A strong partner like Peterson Tractor will help you execute an emissions program that can lower the total cost of owning your fleet.

Emissions Solutions For On-Highway Vehicles

Many localities are now enforcing Idle Reduction Policies for on-highway vehicles such as buses and heavy duty trucks. Peterson Tractor can install Auxiliary Power Units (APUs), to eliminate the need for unnecessary idling, which will also lower fuel consumption and help to comply

with idle reduction policies. In addition, buses can be retrofitted with Exhaust Aftertreatments and Closed Crankcase Ventilation Systems (CCVs) to further reduce emissions. Peterson Tractor can help you choose the best solution and can advise you on the best installation options for your situation.

Emissions Solutions For Off-Road Machines

Peterson Tractor offers emissions retrofits for mobile off-road machines that fall into four categories: Engine Repowers, Engine Upgrade Groups, Oxidation Catalysts and Diesel Particulate Filters. The type of solution appropriate for a specific application depends on the configuration of the machine's exhaust system and specific emissions targeted by application emissions regulations. Trust Peterson Tractor to help you find a cost effective solution.

Emissions Solutions For Stationary Equipment

Emissions retrofits for your stationary equipment from Peterson Tractor are tailored for diesel and gas engines.

Solutions can also be customized for many non-Cat engine applications. We offer three primary types of aftertreatment retrofits that include Oxidation Catalysts, Selective-Catalytic Reduction and Diesel Particulate Filters.

Fuel Injection Monitoring Solutions

Diagnostics begins with assessing your engine performance. Our Fluid Analysis Program helps identify worn or defective fuel systems and air intake components to reduce fuel costs and emissions.

Equipment Brokering Solutions

If converting your existing machines into compliance is not the best solution, Peterson Tractor has the connections to help you broker your equipment globally. Peterson Tractor will find just the right buyer and secure a premium price for your machine.

PETERSON TRACTOR EMISSIONS COMPLIANCE OPTIONS

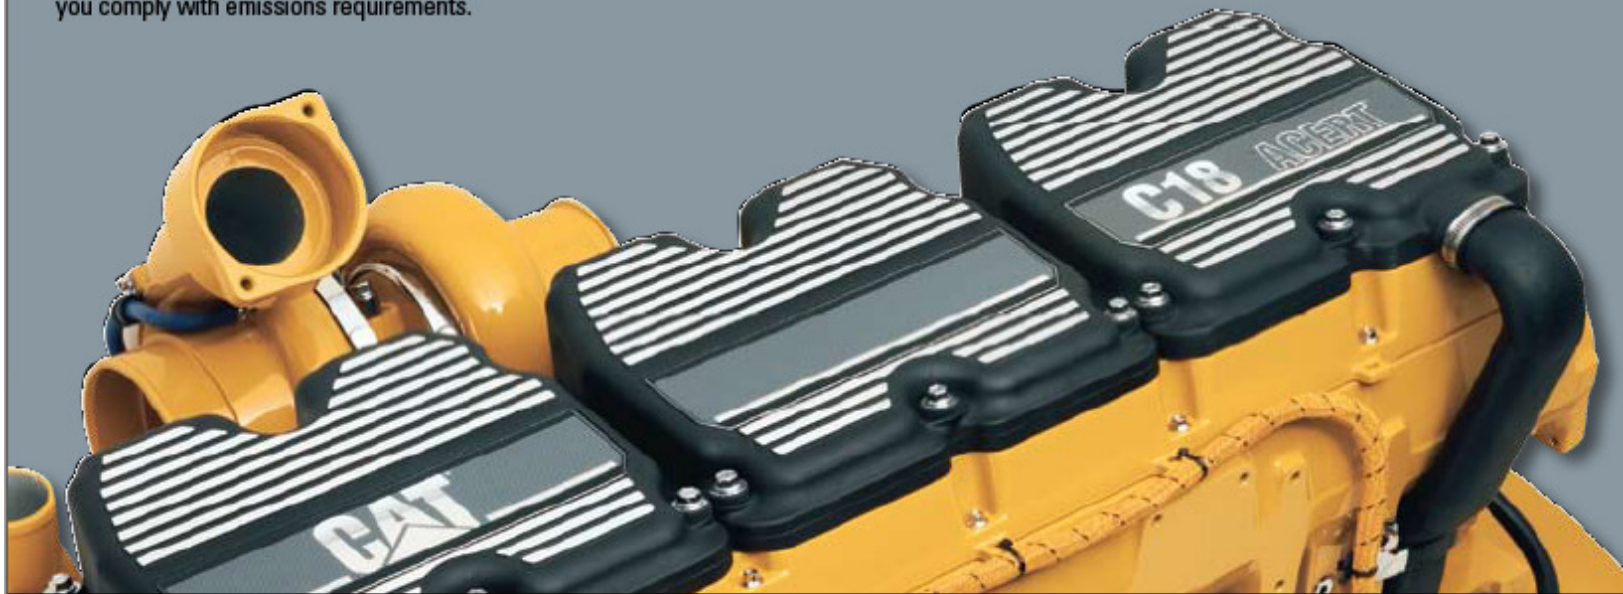

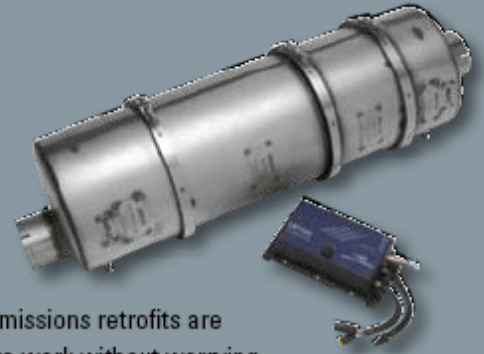

Peterson Tractor provides customers many different ways to attain fully compliant machines. Local, state and regional regulatory bodies are passing laws that mandate compliance. If your equipment doesn't meet emissions standards, it can cost you money, time and lost opportunities. Take a look at just a few of the ways Peterson Tractor can put you into fully compliant equipment:

New Machines – Let us put you in a new machine or engine that fully meets the latest compliance standards.

Rent Compliant Machines – If machine ownership is not for you, or if your job is of a shorter duration, Peterson Tractor maintains a comprehensive fleet of machines, that range from big to small, to help you comply with emissions requirements.

Retrofit Machines – Peterson Tractor has options to economically retrofit your existing equipment to meet compliance standards. Emissions retrofits are solutions that allow you to work without worrying about regulatory compliance.

Machine Rebuilds – Machine Rebuilds can bring your machine up to a higher level of emissions compliance. A Caterpillar Certified Rebuild also carries a new machine standard warranty and serial number.
